Life Science Paper 3 Practical 2014 Grade 11:

Mobile Learning in Schools Jocelyn Wishart, 2017-10-03 Mobile Learning in Schools explores the potential for using mobile devices in diverse school and college settings around the globe. It evaluates the exciting opportunities mobile initiatives bring and shares experience of where things can go wrong in order to ensure that those embarking on new projects are fully informed. Drawing on a wide range of international perspectives, it unpicks knotty sociocultural issues including lack of sustainability, behavioural and ethical concerns, and explores successful student learning. Key issues considered include mobile learning in primary schools, teaching and learning with mobile devices in secondary schools, opportunities inside and outside school, pedagogical principles and sustainability, mobile learning for initial teacher training and CPD, ethical considerations, behaviour matters, disruption, plagiarism, cheating, cyberbullying, assessing mobile learning. With annotated further reading and questions to trigger reflection and further discussion amongst readers, this thought-provoking text provides a detailed survey of this often controversial topic. It is essential reading for all those engaged in understanding the potential for using mobile devices to support students' learning. *Sessional Papers* Great Britain. Parliament. Born to Choose John H Falk, 2017-09-05 Born to Choose is John H Falk's compelling account of why and how we make the endless set of choices we do every second of every day of our lives. Synthesizing research from across the biological and social sciences, Falk argues that human choice making is an evolutionarily ancient and complex process. He suggests that all our choices are influenced by very basic and early evolving needs, and that ultimately each choice is designed to support survival in the guise of perceived well-being. This engaging book breaks new intellectual ground and enhances our understanding, not just of human choice making but human behavior overall.

Learning as Development Daniel A. Wagner, 2017-10-04 Learning is the foundation of the human experience. It begins at birth and never stops, a continuous and malleable link across life stages of human development. Disparities in learning access and outcomes around the world have deep consequences for income, social mobility, health, and well-being. For international development practitioners faced with today's unprecedented environmental and geopolitical pressures, learning should be viewed as a touchstone and target for those seeking to truly effect global change. This book traces the path of international development work from its pre-colonial origins to the emergence of economics as the dominant discipline in the field and lays out a new agenda for policymakers, researchers, and practitioners from early education through adulthood. Learning as Development is an attempt to rethink international education in a changing world. Pedagogies of Biomedical Science Donna Johnson, 2024-05-31 This book confronts the continually evolving nature of biomedical science education by providing a robust account of learning pedagogies and best practice for scholars and researchers in the field. Rather than considering subdisciplines of biomedical science education separately, the volume takes a holistic approach and considers the complexities of teaching biomedical science as a whole, providing a nuanced overview of how a particular practice fits in such

a course overall as well as providing support for development within the reader's own subdiscipline. Ultimately, this holistic approach allows for expansive discussion of relevant pedagogical approaches that will directly inform innovations in the contemporary teaching of biomedical science education. Novel in approach and underpinned by the latest in research innovations, this book will appeal to scholars, researchers, and postgraduate students in the fields of medical education, higher education, and curriculum studies. Policy makers involved with health education and promotion, as well as educational research, will also benefit from the volume.

Children and Companion Animals: Psychosocial, Medical, and Neurobiological Implications Andrea M. Beetz, Lynette A. Hart, Brinda I. Jegatheesan, Naoko Koda, 2018-08-16. Children and companion animals seem to have a natural affinity towards each other. Most children desire a relationship with their own companion animals or at least demonstrate an interest to interact with animals in general. Living with companion animals or interacting with animals may have psychosocial, neurobiological, or medically relevant effects on typically developing children and juveniles, as well as those with diverse and special needs. In this eBook, we present several articles addressing the relationships between children, juveniles, and animals in different countries, including Austria, Germany, Jamaica, Japan, the United Kingdom, and the United States. Three articles discuss approaches in animal-assisted education, including animal keeping and animal-assisted interventions in schools, and an experimental study investigating immediate effects of dogs on reading competence and accompanying stress reactions with cortisol and behavior. Other articles address topics involving children and their companion animals, including dog walking by children and juveniles, risks of dog bites by the family dog, selection of pet dogs for families with a child with autism spectrum disorder (ASD), and the relationships that children with ASD have with their family cats. The interactions between children, juveniles, and animals addressed in this eBook provide new insights into some scarcely investigated themes and underline the significance of animals in children's lives.
