Handbook of Recording Engineering John M. Eargle, 2012-12-06 John Eargle's 4th edition of The Handbook of Recording Engineering is the latest version of his long time classic hands on book for aspiring recording engineers. It follows the broad outline of its predecessors but has been completely recast for the benefit of today's training in recording and its allied arts and sciences. Digital recording and signal processing are covered in detail as are actual studio miking and production techniques including the developing field of surround sound. As always the traditional topics of basic stereo studio acoustics, analog tape recording and the stereo LP are covered in greater detail than you are likely to find anywhere except in archival references. This book has been completely updated with numerous new topics added and outdated material removed. Many technical descriptions are now presented in Sidebars leaving the primary text for more general descriptions. **Handbook of Recording Engineering Fourth Edition** is for students preparing for careers in audio recording, broadcast and motion picture sound work. It will also be useful as a handbook for professionals already in the audio workplace.

Building Performance Simulation for Design and Operation Jan L.M. Hensen, Roberto Lamberts, 2012-09-10 Effective building performance simulation can reduce the environmental impact of the built environment, improve indoor quality and productivity and facilitate future innovation and technological progress in construction. It draws on many disciplines including physics, mathematics, material science, biophysics and human behavioural, environmental and computational sciences. The discipline itself is continuously evolving and maturing and improvements in model robustness and fidelity are constantly being made. This has sparked a new agenda focusing on the effectiveness of simulation in building life cycle processes. **Building Performance Simulation for Design and Operation** begins with an introduction to the concepts of performance indicators and targets followed by a discussion on the role of building simulation in performance based building design and operation. This sets the ground for in depth discussion of performance prediction for energy demand, indoor environmental quality including thermal, visual, indoor air quality and moisture phenomena, HVAC and renewable system performance, urban level modelling, building operational optimization and automation. Produced in cooperation with the International Building Performance Simulation Association (IBPSA) and featuring contributions from fourteen internationally recognised experts in this field, this book provides a unique and comprehensive overview of building performance simulation for the complete building life cycle from conception to demolition. It is primarily intended for advanced students in building services engineering and in architectural, environmental or mechanical engineering and will be useful for building and systems designers and operators.
