GRANITE is a rock. It is formed from magma, deep in the crust. The process causes it to form. Granite has large grains. It often has speckles of black, brown, and gray.

Igneous Rocks form when magma or lava cools and solidifies. They can form on the surface of the Earth (volcanic) or inside the Earth (plutonic).

Sedimentary Rocks form from the remains of plants and animals that have died and been buried under layers of sediment. Over time, the pressure and heat cause them to become solid rock.

Metamorphic Rocks form when existing rocks are changed by heat and pressure. This process is called metamorphism. The rocks are changed but do not melt.
