CHAPTER 2: INNATE IMMUNITY: THE FIRST LINES OF DEFENSE

Anatomic barriers and initial chemical defenses

2-1 Infectious diseases are caused by diverse living agents that replicate in their hosts

2.1 **Multiple choice:** Antibodies, complement proteins, and phagocytic cells provide effective protection against all of the following types of infections in **Figure Q2.1**, except:

Figure Q2.1

2.2 **Multiple choice:** Pathogenic infections induce damage to the host by a variety of mechanisms. While many mechanisms are direct effects of the pathogen, some damaging mechanisms result from the immune response to the infection, as illustrated in **Figure Q2.2**. Examples of damage caused by the host immune response are:

Antivaccination and Vaccine Hesitancy Thomas Aechtner, 2023-08-17 This important book provides a comprehensive guide to understanding vaccine hesitancy as well as the nuances of antivaccination claims It is designed to give clinicians and other professionals targeted information to help them address vaccine hesitancy and antivaccination claims as well as ways of responding to immunisation concerns Alongside the scientific facts around vaccinations it considers the historical foundations of modern vaccine scepticism while offering key insights into the

psychology behind vaccine hesitancy and the factors which influence an individual's decision making. Separating fact from fiction, the book explores the most well-known antivaccine myths, many of which proliferate online, uncovering ways that counter vaccine narratives can influence audiences. Importantly, it also outlines the most effective strategies to address both doubts and misinformation, detailing five general principles to improve communications with tips and guidance to debunk false claims or provide assurance in the face of immunisation doubts. This is essential reading for anyone wishing to really understand the phenomenon of vaccine hesitancy, whether professional student or general reader, and the methods that can be used to challenge misinformation.

Understanding Cancer J. Richard McIntosh, 2019-04-26 *Understanding Cancer* is a brand new undergraduate textbook for students without prior training in biology that integrates an introduction to cancer medicine with descriptions of the biological processes that go wrong to cause cancer's onset and progression. It also highlights the human side of cancer with stories of patients and loved ones touched by the disease, dealing with diagnosis, treatment, and the prospect of death, as well as the broader societal aspects of cancer and its prevention. Key discoveries that have improved our understanding of cancer are presented in sidebars. In spite of this diversity, the book maintains precision and simplicity in describing what is and is not known about cancer, describing the strengths and limitations of current treatments.
