Yen, Travis Swanston, Jagannath Hiremagalur, Bahram Ravani, Ty Aaron Lasky, 2005 [Enhancement & Field Evaluation of an Advanced Clearance Measurement System for Highway Structures, Including Generation of Clearance Diagrams](#) Kin S. Yen, Travis Swanston, Bahram Ravani, Ty A. Lasky, 2008 *Design News*, 2008 **Optical Approaches to Capture Plant Dynamics in Time, Space, and Across Scales** Eetu Puttonen, Norbert Pfeifer, Alexander Bucksch, András Zlinszky, 2018-08-17 Quantifying temporal changes in plant geometry as a result of genetic developmental or environmental causes is essential to improve our understanding of the structure and function relationships in plants Over the last decades optical imaging and remote sensing developed fundamental working tools to monitor and quantify our environment and plants in particular Increased efficiency of methods lowered the barrier to compare integrate and interpret the optically obtained plant data across larger spatial scales and across scales of biological organization In

particular acquisition speed at high resolutions reached levels that allow capturing the temporal dynamics in plants in three dimensions along with multi spectral information beyond human visual senses These advanced imaging capabilities have proven to be essential to detect and focus on analyzing temporal dynamics of plant geometries The focus of this Research Topic is on optical techniques developed to study geometrical changes at the plant level detected within the wavelength spectrum between near UV to near infrared Such techniques typically involve photogrammetric LiDAR or imaging spectroscopy approaches but are not exclusively restricted to these Instruments operating within this range of wavelengths allow capturing a wide range of temporal scales ranging from sub second to seasonal changes that result from plant development environmental effects like wind and heat or genetically controlled adaption to environmental conditions The Research Topic covered a plethora of methodological approaches as suggestions for best practices in the light of a particular research question and to a wider view to different research disciplines and how they utilize their state of the art techniques in demonstrating potential use cases across different scales

Laser Scanning Belén Riveiro, Roderik Lindenbergh, 2019-10-18 This book provides an overview on the evolution of laser scanning technology and its noticeable impact in the structural engineering domain It provides an up to date synthesis of the state of the art of the technology for the reverse engineering of built constructions including terrestrial mobile and different portable solutions for laser scanning Data processing of large point clouds has experienced an important advance in the last years and thus an intense activity in the development of automated data processing algorithms has been noticed Thus this book aims to provide an overview of state of the art algorithms different best practices and most recent processing tools in connection to particular applications Readers will find this a comprehensive book that updates the practice of laser scanning for researchers and professionals not only from the geomatic domain but also other fields such as structural and construction engineering A set of successful applications to structural engineering are illustrated including also synergies with other technologies that can inspire professionals to adopt laser scanning in their day to day activity This cutting edge edited volume will be a valuable resource for students researchers and professional engineers with an interest in laser scanning and its applications in the structural engineering domain
