Objects First with Java David J. Barnes, Michael Kölling, 2012 This is the only introductory programming textbook that uses the BlueJ integrated development environment IDE to teach introductory and object oriented programming principles using Java Its close integration with the BlueJ development environment allows this book to focus on key aspects of object oriented software development from day one BlueJ's clear visualization of classes and objects means that readers can immediately appreciate the differences between them and gain a much better understanding of the nature of an object than they would from simply reading source code Unlike traditional textbooks the chapters are not ordered by language features

but by software development concepts Language features are introduced as a response to the problems to be solved A large number of different interesting projects are used to provide variety and avoid the monotony of a running problem This book takes an objects first approach to teaching the traditionally difficult concepts of objects in a manipulative visual form Throughout the emphasis is on developing a practical approach to programming with students encouraged to add code to existing programs rather than working with an intimidating sheet of blank paper This textbook is printed in four color to aid pedagogy and reader learning
