monopolist 10 minutes 100% 12/13

Until now we have assumed that our company only produces one good. But now we see the case where they have more than one.

### Product variety

Usually firms sell more than one product.

How much variety should a firm offer?

### Horizontal product differentiation

By offering several varieties of what is essentially the same product, a firm can appeal and sell to consumers with **different tastes**.

When a firm offers a variety of products in response to different consumer tastes, it is adopting a **horizontal product differentiation** strategy.

#### Horizontal product differentiation

Products are horizontally differentiated if consumers prefer different products when they have the same price.

### Vertical product differentiation

There are cases in which consumers agree on the product features that make for a good product.

For example, all consumers agree that a car with airbags is better than a car without airbags. However, consumers differ in how much they are willing to pay for airbags.

When a firm responds to differences in consumer willingness to pay for quality by offering different qualities of the same product, it is adopting a **vertical product differentiation** strategy.

#### Vertical product differentiation

Products are vertically differentiated if all consumers rank them in the same way when they have the same price.
