lengthy lists of possible interactions few data are provided for the clinician to gain an understanding of the mechanism of action of the interaction and subsequently apply the information to a particular patient or group of patients For example in the management of patients with HN AIDS who are taking complex prescribed drug regimens herbal products and nutritional supplements many of which are affected by dietary intake careful attention to D NIs is a critical component of therapy Clinicians need to take account of not only the well documented interactions between drugs and nutrients but also the less obvious effects on drug nutrient disposition and metabolism
