IMPORTANT

NOTE: This tachometer has an air cone meter. The tach pointer may not always rest at zero. This is normal. When engine is started, pointer will position on the correct RPM.

Calibration

To change the calibration of the tachometer, remove the flat head screw at the rear of the cup. Carefully slide the cup back along the wires to expose the inner case. Remove the snap in light socket assembly to access the cylinder select switches. The switches are located to the left of the light hole. Use a small screwdriver or an unwound paper clip to change the switch settings.

4 CYL - Switch One up, Switch Two down.
6 CYL - Switch One down, Switch Two up.
8 CYL - Both switches up.
