Custódio,S. Cabral-Fonseca,2013-09-30 This chapter briefly discusses the performance and durability of bonded composite systems used for on site rehabilitation of timber and concrete structures In spite of some recent developments the exploitation of their full potential is still often restrained by the lack of structural design guidance standards for durability assessment and on site acceptance testing Therefore this chapter provides a review of current understanding on the use of hybrid bonded composite systems on the construction site in terms of structural repair reinforcement and seismic retrofit It focuses on the requirements and practical difficulties in the work on site with regards to the performance and durability of the rehabilitated structure the characteristics and requirements that must be fulfilled by structural adhesives and advanced

polymer composite materials and the subsequent need for quality control and in service monitoring It also highlights the factors affecting performance and durability of bonded joints Finally a general overview of the research needs and a bibliography giving references to more detailed information on this topic is given Advanced Fibre-Reinforced Polymer (FRP) Composites for Structural Applications Jiping Bai,2013-09-30 Advanced fibre reinforced polymer FRP composites have become essential materials for the building of new structures and for the repair of existing infrastructure Advanced fibre reinforced polymer FRP composites for structural applications provides an overview of different advanced FRP composites and the use of these materials in a variety of application areas Part one introduces materials used in the creation of advanced FRP composites including polyester vinylester and epoxy resins Part two goes on to explore the processing and fabrication of advanced FRP composites and includes chapters on prepreg processing and filament winding processes Part three highlights properties of advanced FRP composites and explores how performance can be managed and tested Applications of advanced FRP composites including bridge engineering pipe rehabilitation in the oil and gas industry and sustainable energy production are discussed in part four With its distinguished editor and international team of expert contributors Advanced fibre reinforced polymer FRP composites for structural applications is a technical resource for researchers and engineers using advanced FRP composites as well as professionals requiring an understanding of the production and properties of advanced FRP composites and academics interested in this field Provides an overview of different advanced FRP composites and the use of these materials in a variety of application areas Introduces materials used in the creation of advanced FRP composites including polyester vinylester and epoxy resins Explores the processing and fabrication of advanced FRP composites and includes chapters on prepreg processing and filament winding processes *CIRIA Index of Technical Publications* Dargan Bullivant Associates,Construction Industry Research and Information Association,1970 **New Civil Engineer** ,1978 *People of Today* ,2002 **The Consulting Engineer** ,1968 Soil Mechanics G.
