*Fusion Neutronics* Yican Wu, 2017-08-16 This book provides a systematic and comprehensive introduction to fusion neutronics covering all key topics from the fundamental theories and methodologies as well as a wide range of fusion system designs and experiments. It is the first ever book focusing on the subject of fusion neutronics research. Compared with other nuclear devices such as fission reactors and accelerators, fusion systems are normally characterized by their complex geometry and nuclear physics which entail new challenges for neutronics such as complicated modeling, deep penetration, low simulation efficiency, multi-physics coupling, etc. The book focuses on the neutronic characteristics of fusion systems and introduces a series of theories and methodologies that were developed to address the challenges of fusion neutronics. Further, it introduces readers to the unique principles and procedures of neutronics design, experimental methodologies, and methodologies for fusion systems. The book not only highlights the latest advances and trends in the field but also draws on the experiences and skills collected in the author's more than 40 years of research. To make it more accessible and enhance its practical value, various representative examples are included to illustrate the application and efficiency of the methods, designs, and experimental techniques discussed.

**Road and Track**, 1981      **National Union Catalog**, 1980      **Autocar**, 2004      Effective Methods in Algebraic Geometry T. Mora, C. Traverso, 2012-12-06 The symposium MEGA 90 Effective Methods in Algebraic Geometry was held in Castiglioncello, Livorno, Italy, in April 17-21, 1990. The themes we quote from the Call for papers were the following: Effective methods and complexity issues in commutative algebra, projective geometry, real geometry, algebraic number theory, Algebraic geometric methods in algebraic computing, Contributions in related fields, computational aspects of group theory, differential algebra and geometry, algebraic and differential topology, etc. were also welcome. The origin and the motivation of such a meeting that is supposed to be the first of a series deserves to be explained. The subject, the theory, and the practice of computation in algebraic geometry and related domains from the mathematical viewpoint has been one of the themes of the symposia organized by SIGSAM, the Special Interest Group for Symbolic and Algebraic Manipulation of the Association for Computing Machinery. SAME, Symbolic and Algebraic Manipulation in Europe, and AAEC, the semantics of the name is varying; an average meaning is Applied Algebra and Error Correcting Codes.

Based on the achievements and experiences of the author and his team over the past few decades, the book

focuses on the neutronics characteristics of advanced nuclear systems and introduces novel neutron transport methodologies for complex systems high fidelity calculation software for nuclear design and safety evaluation and high intensity neutron source and technologies for neutronics experiments At the same time it describes the development of various neutronics designs for advanced nuclear systems including neutronics design for ITER CLEAR and FDS series reactors The book not only summarizes the progress and achievements of the author s research work but also highlights the latest advances and investigates the forefront of the field and the road ahead
