Microrna Expression Detection Methods:

MicroRNA Expression Detection Methods Zhiguo Wang, Baofeng Yang, 2009-12-23 MicroRNAs miRNAs endogenous noncoding regulatory mRNAs of nucleotides have rapidly emerged as the central players in gene expression regulation. Owing to their ever increasing implications in the control of various biological and pathological processes miRNAs have now been considered novel biomarkers of various human diseases including cancer viral disease cardiovascular disorders metabolic disturbances etc. Particular expression profiles have been associated with particular pathological states. Expression profiling of miRNAs have therefore become extremely important not only for fundamentalists but also for clinicians. However the methodologies used for detecting protein coding mRNAs cannot be directly applied to miRNAs because of their small size. Over the past years researchers have made great efforts to developing techniques suitable for miRNA detection and quantification a wide spectrum of creative and innovative techniques more than 30 different methods have been invented and validated. It has come to the time now to summarize these methods and present them in an orderly manner for better understanding and utilization of these methods to miRNA research and applications. In particular the development of methods for quantifying circulating miRNAs opens up a fascinating opportunity for realizing miRNA as diagnostic and prognostic biomarkers of human disease. A book on this subject may help boosting up the passion of researchers to further improve the existing techniques and develop more new methods to fit to new application needs. These considerations prompted us and urged us to undertake the work writing a book focusing on miRNA expression detection methods.

MicroRNA Detection and Target Identification Tamas Dalmay, 2023-01-23 This updated volume reflects new and evolved techniques to study detection profiling and manipulation of microRNAs miRNAs in plants and animals. After overviews of how best to detect identify and validate microRNAs the book continues by exploring state of the art protocols for microRNA detection approaches to profile the expression level of microRNAs spatial expression analysis describe in silico analysis of microRNAs and their targets as well as protocols for functional analysis of microRNAs and their targets by CRISPR Cas. Written for the highly successful *Methods in Molecular Biology* series chapters include introductions to their respective topics lists of the necessary materials and reagents step by step and readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls. Authoritative and up to date *MicroRNA Detection and Target Identification Methods and Protocols* Second Edition aims to ensure successful results in the further study of this vital field.

Gastric Cancer Prewarning and Early Diagnosis System Daxiang Cui,2017-06-21 The book explores recent developments in the application of nanotechnology in the early detection of gastric cancer It discusses various aspects such as screening for gastric cancer associated biomarkers establishing new ultrasensitive detection methods based on nanoparticle labeling and nanoeffects developing a new generation of nanodevices for high throughput examination of serum and breath biomarkers developing multifunctional nanoprobe for targeted imaging and simultaneous therapy of gastric cancer evaluating the biosafety of multifunctional nanoprobe and the establishment of a pre warning and early diagnosis system It also presents clinical applications and prospects The book provides a valuable reference for researchers in nanomedicine and clinicians involved in gastric cancer and radiology

Luminescence-based MicroRNA Detection Methods Kyle A. Cissell,2010 MicroRNAs miRNA are short 18-24 nucleotide long noncoding RNAs These small RNAs which

are initially transcribed in the nucleus are transported into the cell cytoplasm where they regulate protein translation either through direct cleavage of mRNA or indirect inhibition through binding to mRNA and disrupting the protein translation machinery Recently miRNAs have gained much attention due to their implication in numerous diseases and cancers It has been found that heightened or lowered levels of miRNA in diseased cells vs healthy cells are linked to disease progression It is therefore immensely important to be able to detect these small molecules Current detection methods of Northern blotting microarrays and qRT PCR suffer from drawbacks including low sensitivity a lack of simplicity being semi quantitative in nature time consuming and requiring expensive instruments This work aims to develop novel miRNA technologies which will address these above problems Bioluminescent labels are promising alternatives to current methods of miRNA detection Bioluminescent labels are relatively small similar in size to fluorescent proteins and they emit very intense signals upon binding to their substrate Bioluminescent labels are advantageous to fluorescent labels in that they do not require an external excitation source rather the excitation energy is supplied through a biochemical reaction Therefore background signal due to excitation is eliminated They also have the advantage of being produced in large amounts through bacterial expression Four miRNA detection methods are presented which utilize luminescence based methods Three employ Renilla luciferase a bioluminescent protein and one is based on fluorescence The presented methods are capable of detecting miRNA from the picomole nanomolar level down to the femtomole picomolar level These methods are rapid sensitive simple and quantitative can be employed in complex matrices and do not require expensive instruments All methods are hybridization based and do not require amplification steps

MicroRNA Methods John J. Rossi, 2007-08-30 MicroRNAs miRNA are tiny bits of genetic material that were unknown nearly 10 years ago but now represent an exciting field of study in biology Upon their discovery researchers revealed for the first time a new mechanism by which microRNA can stop the function of messenger RNA mRNA by literally cutting it in half interfering with the normal function of specific messenger RNAs in gene expression This expression of genes that code for essential proteins is essentially what controls whether a cell turns into a liver lung or brain cell for example Understanding what activates this process or stops it is a key to understanding the biological process and builds a foundation for advances in medicine and other fields This volume in Methods in Enzymology presents valuable methods for studying MicroRNA with three sections covering identification of MicroRNAs and their targets MicroRNA expression maturation and functional analysis and MicroRNAs and disease
