This book contains the fundamentals of a discipline which could be called Structural Analysis in Microelectronics and Fiber Optics. It deals with mechanical behavior of microelectronic and fiber optic systems and is written in response to the crucial need for a textbook for a first in depth course on mechanical problems in microelectronics and fiber optics. The emphasis of this book is on electronic and optical packaging problems and analytical modeling. This book is apparently the first attempt to select advance and present those methods of classical structural mechanics which have been or can be applied in various stress strain problems encountered in high technology engineering and some related areas such as materials science and solid state physics. The following major objectives are pursued in Structural Analysis in Microelectronic and Fiber Optic Systems: Identify structural elements typical for microelectronic and fiber optic systems and devices and introduce the student to the basic concepts of the mechanical behavior of microelectronic and fiber optic structures subjected to thermally induced or external loading. Select advance and present methods for analyzing stresses and deflections developed in microelectronic and fiber optic structures demonstrate the effectiveness of the methods and approaches of the classical structural analysis in the diverse mechanical problems of microelectronics and fiber optics and give students of engineering as well as practicing engineers and designers a thorough understanding of the main principles involved in the analytical evaluation of the mechanical behavior of microelectronic and fiber optic systems.
