A Vector Field Method on the Distorted Fourier Side and Decay for Wave Equations with Potentials Roland

Donninger, Joachim Krieger, 2016-04-26 The authors study the Cauchy problem for the one dimensional wave equation $2tu_t x^2 x u_{xx} + V(x)u_t = 0$. The potential V is assumed to be smooth with asymptotic behavior $V(x) \sim x^{-2}$ as $x \rightarrow \infty$. They derive dispersive estimates energy estimates and estimates involving the scaling vector field $t \partial_t + x \partial_x$ where the latter are obtained by employing a vector field method on the distorted Fourier side. In addition they prove local energy decay estimates. Their results have immediate applications in the context of geometric evolution problems. The theory developed in this paper is fundamental for the proof of the co dimension 1 stability of the catenoid under the vanishing mean curvature flow in Minkowski space see Donninger Krieger Szeftel and Wong Codimension one stability of the catenoid under the vanishing mean curvature flow in Minkowski space preprint arXiv 1310.5606 2013 *Federal Register*, 2013-06

Social Robots in Education Georgios

Lampropoulos, Stamatios Papadakis, 2025-05-03 This book focuses on recent advances in the field of social robots and their integration in education. Hence the book offers an overview of recent research into the adoption, integration, advancements and impact of social robots and AI in education and presents guidelines and suggestions on how to integrate them in classrooms. Specifically the book provides an in depth overview of social robots and their use in education. Presents the advances of social robots and AI in education. Showcases innovative solutions and outcomes of integrating social robots in classrooms. Discusses the challenges, benefits and future research directions of using social robots and AI in education.

Advancing the Frontiers of Heterodox Economics Tae-Hee Jo, Zdravka

Todorova, 2015-07-30 This collection of essays honors the life and work of one of the most prominent and fervent heterodox economists, Frederic S. Lee, who has been at the heart of the heterodox economics movements for the past three decades. Authors in this book demonstrate that heterodox economic has transcended the criticism of mainstream economics and more importantly that constructive developments are in the making by way of cross communications among various heterodox economics traditions. Frederic S. Lee's contributions to heterodox economics are centered on three themes: the making of a history and identity of heterodox economics, heterodox microeconomics and the heterodox analysis of social provisioning. Part I addresses the importance of history, theory, research methods and institutions in the making of the identity of heterodox economics as an alternative to mainstream economics. Part II delves into heterodox microeconomic theories, in particular investment, pricing, competition, markets and market governance as foundations of heterodox macroeconomic analyses. Part III expands the analysis of the capitalist social provisioning process with an emphasis on its subsystems and their relationships over historical time. Part IV encapsulates the life and work of Frederic S. Lee. Throughout his intellectual life, Frederic S. Lee

has shown to many that the development of heterodox economics is rendered possible by unselfish and ceaseless efforts to build both theory and institutions Essays in this book attest that establishing an alternative critical theory to the status quo is not only possible but also serviceable to the majority of the population
