

Abstract: *Phacelia* is a well-represented, but understudied genus of the family Boraginaceae. Plant species mostly occur within Mediterranean climate bioregions. *Phacelia* has striking plant architecture, bright blue-purple coloration, and long-lived perennial habit. *Phacelia* is distributed over vast western North America, with high species richness. This taxon group needs additional taxonomic research to understand the diversity of the genus and to conserve the wild type of plants.

This result is easily interpreted as that a 1% increase in the size of the sample leads to an increase in the estimated effect of the treatment on the outcome of 0.0001. This is a very small effect, but it is statistically significant. The reason for this is that the sample size is very large, and the standard error of the estimate is very small. In general, the larger the sample size, the more precise the estimate of the treatment effect will be.
