Observations of the consequences of the use of single pesticides, which is still the preferred practice, show a serious gap in planning with consequences and impacts will be unpredictable. Recommendations to diversify the use of insecticides are made part of production development. This new gap in production is not the only critical situation. Increased levels of resistance to pesticides and target insects. This means systems that must be constantly and adaptively changing by using the genetic targets that are being selected. This includes need for complete, highly and integrated pest control systems. Increasingly, these systems in the future in the form of combinations of the pesticides against it, including the possibility of using plants to control, even that these systems are already in existence.
