**On the Relationship Between Determinate and MSV Solutions in Linear RE Models** Bennett T. McCallum, 2004 This paper considers the possibility that in linear rational expectations RE models all determinate uniquely non explosive solutions coincide with the minimum state variable MSV solution which is unique by construction In univariate specifications of the form  $y_t = A y_{t-1} + C u_t$  that result holds if a RE solution is unique and non explosive then it is the same as the MSV solution Also this result holds for multivariate versions if the A and C matrices commute and a certain regularity condition holds More generally however there are models of this form that possess unique non explosive solutions that differ from their MSV solutions Examples are provided and a strategy for easily constructing others is outlined

*International Trade and Resource Allocation* A. D. Woodland, 1982 The primary aim of this work is to present the modern theory of international trade within a unified framework placing the traditional two dimensional model and its simple generalizations in proper perspective This general and unified analysis is based upon microeconomic principles and the use of modern duality theory Topics are thereby examined in terms of cost expenditure indirect utility and gross national production rather than production direct utility and transformation functions When using such factors concise models can be formulated highlighting the assumed economic behavior and allowing easy derivation of results Although the book emphasizes the theoretical aspects of international trade it also links this theory to some current empirical research Each chapter has a selection of problems for solution which include proofs of assertions within the text special cases and
