Early mathematics counts Yasmin A Sitabkhan, Linda Platas, 2018-07-23 This occasional paper examines common instructional strategies in early grade mathematics interventions through a review of studies in classrooms in low and middle income countries Twenty four studies met the criteria for inclusion and analyses reveal four sets of instructional strategies for which there is evidence from multiple contexts Of the 24 studies 16 involved the use of multiple representations 10 involved the use of developmental progressions 6 included supporting student use of explanation and justification and 5 included integration of informal mathematics Based on the review we provide conclusions and recommendations for future research and policy *International Handbook of Comparative Large-Scale Studies in Education* Trude Nilsen, Agnes Stancel-Piątak, Jan-Eric Gustafsson, 2022-09-21 This handbook is the first of its kind to provide a general and comprehensive overview of virtually every aspect of International Large Scale Assessment ILSA It includes historical economic and policy perspectives theoretical foundations methodology and reviews of findings from analyses of ILSA data After decades during which ILSAs have generated knowledge within central areas of education research and gained increased and substantial impact on educational policy practice and research such a broad overview for a wide ranging audience is much needed With contributions from authors and editors from all continents this handbook appeals to an international audience and keeps a neutral perspective not favoring one ILSA over another The handbook is suitable to be read by politicians researchers and stakeholders who are seeking an overview of ILSAs their history and development and both potential benefits and limitations with regard to policy implications The reviews of findings from studies analyzing ILSA data will be of interest to stakeholders teachers researchers and policymakers Considering that the reviews extend to all fields pertaining to educational research the book will be valuable to all researchers interested in education Students may use the book to learn about ILSAs in the context of policy theoretical underpinnings or research Moreover the methodology section is written in a manner that is understandable and accessible for students stakeholders or researchers not familiar with these data This methodology part however is also a valuable resource for researchers who are familiar with ILSA data as it provides overviews of the design and sampling procedures of several ILSAs and includes advice on methods of analysis Even the owners of the ILSAs may find the book valuable as it contains overviews and insights into a number of ILSAs provides information how the data is used by the research community and includes recommendations for future instruments Numeracy and Learning Difficulties Peter Westwood, 2016-09-01 Numeracy and Learning Difficulties provides guidance on how to develop flexible teaching methods and strategies to improve mathematical skills of students It discusses common areas of learning difficulty in mathematics and looks at ways teachers can determine gaps in students knowledge as well as how to develop curricula and problem solving strategies to address these gaps **International Reflections on the Netherlands Didactics of Mathematics** Marja van den Heuvel-Panhuizen, 2019-08-13 This open access book inspired by the ICME 13 Thematic Afternoon on European Didactic

Traditions takes readers on a journey with mathematics education researchers developers and educators in eighteen countries who reflect on their experiences with Realistic Mathematics Education RME the domain specific instruction theory for mathematics education developed in the Netherlands since the late 1960s Authors from outside the Netherlands discuss what aspects of RME appeal to them their criticisms of RME and their past and current RME based projects It is clear that a particular approach to mathematics education cannot simply be transplanted to another country As such in eighteen chapters the authors describe how they have adapted RME to their individual circumstances and view on mathematics education and tell their personal stories about how RME has influenced their thinking on mathematics education *Science Teachers' Learning* National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Teacher Advisory Council, Board on Science Education, Committee on Strengthening Science Education through a Teacher Learning Continuum, 2016-01-15

Currently many states are adopting the Next Generation Science Standards NGSS or are revising their own state standards in ways that reflect the NGSS For students and schools the implementation of any science standards rests with teachers For those teachers an evolving understanding about how best to teach science represents a significant transition in the way science is currently taught in most classrooms and it will require most science teachers to change how they teach That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science their familiarity with a range of instructional strategies and the skills to implement those strategies in the classroom Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers learning across their careers from their initial training to continuing professional development A teacher's capability to improve students scientific understanding is heavily influenced by the school and district in which they work the community in which the school is located and the larger professional communities to which they belong *Science Teachers Learning* provides guidance for schools and districts on how best to support teachers learning and how to implement successful programs for professional development This report makes actionable recommendations for science teachers learning that take a broad view of what is known about science education how and when teachers learn and education policies that directly and indirectly shape what teachers are able to learn and teach The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers *Science Teachers Learning* will be a valuable resource for classrooms departments schools districts and professional organizations as they move to new ways to teach science **Learning to Teach in the Secondary School** Susan Capel, Marilyn Leask, Sarah Younie, 2016-03-17

Interrogating Whiteness and Relinquishing Power White Faculty's Commitment to Racial Consciousness in STEM Classrooms is a collection of narratives that will transform the teaching of any faculty member who teaches in the STEM system. The book links issues of inclusion to teacher excellence at all grade levels by illuminating the critical influence that racial consciousness has on the behaviors of White faculty in the classroom. It functions as an analytical tool scaffolding exemplary examples to inspire readers to engage in the complex and difficult work of assessing their own racial consciousness and teacher effectiveness. White pre-service teachers in STEM education rarely see the importance of the link between race and the teaching and learning of mathematics in part because the White faculty who are teaching these subjects rarely engage in the study of racial projects in STEM. From this perspective, the authors of this book contend that the classroom is a racialized environment that if not addressed can reproduce racial structures and hierarchies in cyclical ways. **Japan's Official**

Development Assistance White Paper, 2013 *Teachers and Educational Quality* UNESCO Institute for Statistics, 2006 *Teachers and Educational Quality Monitoring Global Needs for 2015* provides global and regional assessments on the state of teachers and education quality. By highlighting trends in the numbers and quality of teachers especially in developing countries, it explores the policy implications that come into play when attempts are made to bridge any gaps between the two. It also compares the strengths and shortcomings of recruitment and deployment policies as well as looking at working conditions around the world. Data on less developed countries in particular are presented from a wide range of sources. These include administrative data, student assessment studies, and special data collection on primary and secondary teachers in 25 countries. Aiming to inform policy making, the report employs international benchmarks for monitoring change. This publication also features a unique methodology for simulating teacher demand by 2015. It not merely projects demand but defines fixed targets described in terms of indicators, also applying a model to quantify the minimum required to reach stated goals. Overview of ...
