#### 10.4 Maintenance of the cathode chamber

When dismantling the cathode chamber (see Fig. 18), handle carefully to avoid touching the platinum wire, platinum mesh, or the hole walls. If the cathode chamber is contaminated, it may reduce electrolytic efficiency, prolong electrolytic time, increase blank current due to moisture absorption, or cause unstable titration. To clean, rinse the glass exterior and platinum mesh with acetone (avoid damaging the platinum parts), inject acetone into the chamber, seal the drying tube, and shake thoroughly — repeat as needed. Finally, pour acetone over the outer glass. Do not clean the electrode lead. If dirt remains, immerse the cathode chamber in vitriol as shown in Fig. 19.

**Figure 18: Dismantling of the cathode chamber**

**Figure 19: Immersion of the cathode chamber**

Use a dryer with hot air to thoroughly dry the cathode, especially in areas where moisture is hard to remove (see Fig. 20). If any residual moisture remains, place the cathode chamber in a vacuum dryer and dry it for over 11 hours.

**Freeze-Drying** Georg-Wilhelm Oetjen, Peter Haseley, 2008-01-08 Many modern pharmaceutical and biological products e.g. blood derivatives, vaccines, cytostatic drugs, antibiotics, bacteria cultures but also consumer goods such as soluble coffee are freeze dried to transform perishable substances into a form that can be stored and reconstituted to their almost original state without loss of quality. The book describes the up to date fundamentals of freeze drying not just presenting the process in all its seven steps theoretically but explaining it with many practical examples. Many years of experience in freeze drying allow the authors to supply valuable criteria for the selection of laboratory pilot and production plants, discussing the advantages, drawbacks and limitations of different plant designs. In this second completely revised edition, process and plant automation are introduced in a separate section and methods to transfer pilot plant qualifications and process data to production are presented. The guidelines for process and plant evaluation and qualifications have been updated and enlarged. Trouble shooting is concentrated in a section of its own and literature has been updated with 100 new quotations to include references as recent as 2002 and 100 new tables and figures have been added.
