Life Sciences P1 And P2 March 2015:

Oscillations, Waves and Patterns in the Physical and Life Sciences Rabih Sultan, Nobuhiko J. Suematsu, Federico Rossi, Istvan Lagzi, 2022-11-21 Curiosity And Passion For Science And Art Uwe B Sleytr, 2016-07-04 This book describes the accomplishments of a curious and imaginative scientist and his endeavours to translate or even to extrapolate scientific insights into the world of art The science section in this volume concerns studies on S layers a very important class of proteins found on the surface of numerous Bacteria and nearly all Archaea S layer proteins are one of the most abundant biopolymers on our planet and assemble into the simplest type of biological membrane Moreover they are unique building blocks and patterning elements for the production of complex supramolecular structures and nanoscale devices in nanobiotechnology molecular nanotechnology synthetic biology biomimetics and nanomedicine In the second part of this book the author goes on to passionately describe how his scientific activities stimulated his art work which in particular concerns the visualization of results and the potential of synthetic biology and evolutionary events induced by genetic manipulations Most importantly the engagement in art allowed him to leave the rather curtailed canon of science and reach a mental state of unlimited freedom of thoughts Mask like sculptures are used as examples to visualize the intersection between science and art and in particular the unpredictability and mystery of scientific visions *Neuronal Self-Defense: Compensatory Mechanisms in Neurodegenerative Disorders* Rosanna Parlato, Pier Giorgio Mastroberardino, 2016-02-26 Neurodegenerative disorders are characterized by the progressive loss of specific populations of neurons with consequent deterioration of brain s function and dramatic impact on human behavior At present there are no effective cures for neurodegenerative diseases Because unambiguous diagnosis is possible only after manifestation of symptoms when a large proportion of neurons has been already lost therapies are necessarily confined to alleviation of symptoms Development of cures halting the disease course is hampered by our rudimentary understanding of the etiopathology Most neurodegenerative disorders are sporadic and age related and even for those of known genetic origin the mechanisms influencing disease onset and progression have not been fully characterized The different diseases however share important similarities in the mechanisms responsible for neuronal loss which is caused by a combination of endogenous and exogenous challenges Trophic deprivation oxidative stress accumulation of abnormal protein aggregates and bioenergetics defects have been described in most if not all neurodegenerative disease To counterbalance these noxious stimuli cells deploy at least during the initial pathogenic states intrinsic neuroprotective responses These are general compensatory mechanisms common to several neurodegenerative conditions which reprogram cellular physiology to overcome stress Adaptation includes strategies to optimize energetic resources for instance reduction of rRNA synthesis to repress translation suppression of transcription and bioenergetics and metabolic redesign Additional mechanisms include potentiation of antioxidant capacity induction of endoplasmic reticulum ER stress and activation of protein quality control systems and

autophagy Ineffective execution of these compensatory strategies severely threatens cellular homeostasis and favors onset of pathology Therefore a better understanding of these buffering mechanisms and of their interconnections may help to devise more effective therapeutic tools to prolong neuronal survival and activity independently of the original genetic mutations and stress insults This Research Topic focuses on the initial compensatory responses protecting against failure of those mechanisms that sustain neuronal survival and activity The collection intends to summarize the state of the art in this field and to propose novel research contributes with the ultimate goal of inspiring innovative studies aimed to contrast progression of neurodegenerative diseases *Book of Abstracts of the 66th Annual Meeting of the European Association for Animal Production* EAAP scientific committee,2023-09-04 This Book of Abstracts is the main publication of the 66th Annual Meeting of the European Federation for Animal Science 2015 in Warsaw Poland It contains abstracts of the invited papers and contributed presentations The meeting addressed subjects relating to science and innovation Important problems were also discussed during the sessions of EAAP's nine Commissions Animal Genetics Animal Nutrition Animal Management and Health Animal Physiology Cattle Production Sheep and Goat Production Pig Production Horse Production and Livestock Farming Systems *September 2019 Monthly Current Affairs with MCQs for Competitive Exams* Disha Experts,2019-09-01
