Life Sciences Pjune 2014 Exam Guide:

Codes of Ethics and Ethical Guidelines Kelly Laas, Michael Davis, Elisabeth Hildt, 2022-01-03 This book investigates how ethics generally precedes legal regulation and looks at how changes in codes of ethics represent an unparalleled window into the research innovation and emerging technologies they seek to regulate. It provides case studies from the fields of engineering, science, medicine, and social science showing how professional codes of ethics often predate regulation and help shape the ethical use of emerging technologies and professional practice. Changes in professional ethics are the crystallization of ongoing conversation in scientific and professional fields about how justice, privacy, safety, and human rights should be realized in practice where the law is currently silent. This book is a significant addition to this area of practical and professional ethics and is of particular interest to practitioners, scholars, and students interested in the areas of practical and applied ethics.

From Is to Ought: The Place of Normative Models in the Study of Human Thought Shira Elqayam, David E. Over, 2016-08-12 In the study of human thinking, two main research questions can be asked: Descriptive Q: What is human thinking like? Normative Q: What ought human thinking be like? For decades, these two questions have dominated the field, and the relationship between them generated many a controversy. Empirical, normativist approaches regard the answers to these questions as positively correlated in essence: human thinking is what it ought to be, although what counts as the ought standard is moot. In contemporary theories of reasoning and decision making, this is often associated with a Panglossian framework, an adaptationist approach which regards human thinking as a priori rational. In contrast, prescriptive normativism sees the answers to these two questions as negatively correlated. Normative models are still relevant to human thought, but human behaviour deviates from them quite markedly, with the invited conclusion that humans are often irrational. Prescriptive normativism often results in a Meliorist agenda which sees rationality as amenable to education. Both empirical and prescriptive normativism can be contrasted with a descriptivist framework for psychology of human thinking. Following Hume's strict divide between the is and the ought, descriptivism regards the descriptive and normative research questions as uncorrelated or dissociated, with only the former question suitable for psychological study of human behaviour. This basic division carries over to the relation between normative ought: rationality based on conforming to normative standards and instrumental rationality based on achieving one's goals. Descriptivist approaches regard the two as dissociated, whereas normativist approaches tend to see them as closely linked, with normative arguments defining and justifying instrumental rationality. This research topic brings together diverse contributions to the continuing debate. Featuring contributions from leading researchers in the field, the book covers a wide range of subjects arranged by six sections: The standard picture; Normativist perspectives; In defence of soft normativism; Exploring normative models; Descriptivist perspectives; Evolutionary and ecological accounts; Empirical reports. With a total of some 24 articles from 55 authors, this comprehensive treatment includes theoretical analyses, meta-theoretical critiques, commentaries, and a range of empirical reports. The contents of the
