*Голая статистика* Чарльз Уилан,2016     How to Lie with Statistics D. Huff,1969     Dark Data David J. Hand,2022-02-15 Data describe and represent the world However no matter how big they may be data sets don t indeed cannot capture everything Data are measurements and as such they represent only what has been measured They don t necessarily capture all the information that is relevant to the questions we may want to ask If we do not take into account what may be missing unknown in the data we have we may find ourselves unwittingly asking questions that our data cannot actually address come to mistaken conclusions and make disastrous decisions In this book David Hand looks at the ubiquitous phenomenon of missing data He calls this dark data making a comparison to dark matter i e matter in the universe that we know is there but which is invisible to direct measurement He reveals how we can detect when data is missing the types of settings in which missing data are likely to be found and what to do about it It can arise for many reasons which themselves may not be obvious for example asymmetric information in wars time delays in financial trading dropouts in clinical trials deliberate selection to enhance apparent performance in hospitals policing and schools etc What becomes clear is that measuring and collecting more and more data big data will not necessarily lead us to better understanding or to better decisions We need to be vigilant to what is missing or unknown in our data so that we can try to control for it How do we do that We can be alert to the causes of dark data design better data collection strategies that sidestep some of these causes and we can ask better questions of our data which will lead us to deeper insights and better decisions     **Misused Statistics, Second Edition** Herbert Spirer,Louise Spirer,1998-07-16 Revised and updated edition of a standard in the field Alerts readers to the problems inherent in statistical practice illustrating the types of misused statistics with well documented real world examples nearly half new to this edition drawn from a wide range of areas including the media public policy polls and surveys political elections and debates advertising science and health care and business and economics     *Data in Society* Jeff Evans, This work analyses societal trends and controversies related to developments in data ownership access construction dissemination and interpretation looking at the ways that society interacts with and uses statistical data     Bad Data Georgina Sturge,2022-11-03 Essential reading An incisive and urgently

needed book Tim Harford An entertaining introduction to the uses and misuses of data a penetrating analysis of why statistical literacy matters to our politics and our daily lives Professor Jonathan Portes Our politicians make vital decisions and declarations every day that rely on official data But should all statistics be trusted In BAD DATA House of Commons Library statistician Georgina Sturge draws back the curtain on how governments of the past and present have been led astray by figures littered with inconsistency guesswork and uncertainty Discover how a Hungarian businessman s bright idea caused half a million people to go missing from UK migration statistics Find out why it s possible for two politicians to disagree over whether poverty has gone up or down using the same official numbers and for both to be right at the same time And hear about how policies like ID cards super casinos and stopping ex convicts from reoffending failed to live up to their promise because they were based on shaky data With stories that range from the troubling to the empowering to the downright absurd BAD DATA reveals secrets from the usually closed off world of policy making It also suggests how once we understand the human story behind the numbers we can make more informed choices about who to trust and when
