Salinity Tolerance in Plants: Mechanisms and Regulation of Ion Transport Vadim Volkov, Mary J. Beilby, 2018-01-12 Life presumably arose in the primeval oceans with similar or even greater salinity than the present ocean so the ancient cells were designed to withstand salinity However the immediate ancestors of land plants most likely lived in fresh or slightly brackish water The fresh brackish water origins might explain why many land plants including some cereals can withstand moderate salinity but only 1 2 % of all the higher plant species were able to re discover their saline origins again and survive at increased salinities close to that of seawater From a practical side salinity is among the major threats to agriculture having been one of the reasons for the demise of the ancient Mesopotamian Sumer civilisation and in the present time causing huge annual economic losses of over 10 billion USD The effects of salinity on plants include osmotic stress disruption of membrane ion transport direct toxicity of high cytoplasmic concentrations of sodium and chloride on cellular processes and induced oxidative stress Ion transport is the crucial starting

point that determines salinity tolerance in plants Transport via membranes is mediated mostly by the ion channels and transporters which ensure selective passage of specific ions The molecular and structural diversity of these ion channels and transporters is amazing Obtaining the detailed descriptions of distinct ion channels and transporters present in halophytes marine algae and salt tolerant fungi and then progressing to the cellular and the whole organism mechanisms is one of the logical ways to understand high salinity tolerance Transfer of the genes from halophytes to agricultural crops is a means to increase salt tolerance of the crops The theoretical scientific approaches involve protein chemistry structure function relations of membrane proteins synthetic biology systems biology and physiology of stress and ion homeostasis At the time of compiling this e book many aspects of ion transport under salinity stress are not yet well understood The e book has attracted researchers in ion transport and salinity tolerance We have combined our efforts to achieve a wider more detailed understanding of salt tolerance in plants mediated by ion transport to understand present and future ways to modify and manipulate ion transport and salinity tolerance and also to find natural limits for the modifications UPSC CDS Topic Wise Previous Years' 2010-2020 Solved & Practice Questions eBook Adda247 Publications, ADDA 247 is launching a complete and comprehensive eBook on UPSC CDS IMA INA AFA and CDS OTA The eBook is updated as per the latest examination pattern and is suitable for UPSC CDS IMA INA AFA and UPSC CDS OTA Officer Training Academy The aim of this eBook is to help students learn and understand the new pattern of recruitment exams which will help them to maximize their scores in the competitive examination The eBook has been prepared by experienced faculties subject matter experts and with the expertise of Adda247 keeping the new pattern and challenges of competitive exams in mind Salient Features of the eBook 6000 Topic Wise Previous year Questions 2010 2020 2500 Practice Questions with Detailed Solutions 6 Practice Papers

AIIMS Annual Report All-India Institute of Medical Sciences,2014 **Understanding Developmental Dyslexia: Linking Perceptual and Cognitive Deficits to Reading Processes** Pierluigi Zoccolotti,Peter F. de Jong,Donatella Spinelli,2016-06-24 Understanding the mechanisms responsible for developmental dyslexia DD is a key challenge for researchers A large literature mostly concerned with learning to read in opaque orthographies emphasizes phonological interpretations of the disturbance Other approaches focused on the visual perceptual aspects of orthographic coding Recently this perspective was supported by imaging data showing that individuals with DD have hypo activation in occipitotemporal areas a finding common to both transparent and opaque orthographies Nevertheless it is difficult to infer causal relationships from activation data Accommodating these findings within the cognitive architecture of reading processes is still an open issue This is a general problem which is present in much of the literature For example several studies investigating the perceptual and cognitive abilities that distinguish groups of children with and without DD failed to provide explicit links with the reading process Thus several areas of investigation e.g acoustic deficits or magnocellular deficiencies have been plagued by replication failures Furthermore much research has neglected the possible contribution of comorbid

symptoms By contrast it is now well established that developmental disorders present a large spectrum of homotopic and heterotopic co morbidities that make causal interpretations problematic This has led to the idea that the etiology of learning difficulties is multifactorial thus challenging the traditional models of DD Recent genetic studies provide information on the multiple risk factors that contribute to the genesis of the disturbance Another critical issue in DD is that much of the research has been conducted in English speaking individuals However English is a highly irregular orthography and doubts have been raised on the appropriateness of automatically extending interpretations based on English to other more regular orthographies By contrast important information can be gotten from systematic comparisons across languages Thus the distinction between regular and irregular orthographies is another potentially fruitful area of investigation Overall in spite of much research current interpretations seem unable to integrate all available findings Some proposals focus on the cognitive description of the reading profile and explicitly ignore the distal causes of the disturbance Others propose visual acoustic or phonological mechanisms but fail to link them to the pattern of reading impairment present in different children The present Research Topic brings together studies based on different methodological approaches i e behavioural studies examining cognitive and psycholinguistic factors eye movement investigations biological markers neuroimaging and genetic studies involving dyslexic groups with and without comorbid symptoms and in different orthographies transparent and opaque to identify the mechanisms underlying DD The RT does not focus on a single model or theory of dyslexia but rather brings together different approaches and ideas which we feel are fruitful for a deeper understanding developmental dyslexia

Immune system modeling and analysis Ramit Mehr, Miles Davenport, 2015-04-22 The rapid

development of new methods for immunological data collection from multicolor flow cytometry through single cell imaging to deep sequencing presents us now for the first time with the ability to analyze and compare large amounts of immunological data in health aging and disease The exponential growth of these datasets however challenges the theoretical immunology community to develop methods for data organization and analysis Furthermore the need to test hypotheses regarding immune function and generate predictions regarding the outcomes of medical interventions necessitates the development of mathematical and computational models covering processes on multiple scales from the genetic and molecular to the cellular and system scales The last few decades have seen the development of methods for presentation and analysis of clonal repertoires those of T and B lymphocytes and phenotypic surface marker based repertoires of all lymphocyte types and for modeling the intricate network of molecular and cellular interactions within the immune systems This e Book which has first appeared as a Frontiers in Immunology research topic provides a comprehensive online open access snapshot of the current state of the art on immune system modeling and analysis

The Changing Faces of Glutathione, a Cellular

Protagonist Alfonso Pompella, Alessandro Corti, 2015-07-17 Glutathione GSH has been described for a long time just as a defensive reagent against the action of toxic xenobiotics drugs pollutants carcinogens both directly and as a cofactor for GSH transferases As a prototype antioxidant it has been involved in cell protection from the noxious effect of excess oxidant stress both directly and as a cofactor of glutathione peroxidases In addition it has long been known that GSH is capable of forming disulfide bonds with cysteine residues of proteins and the relevance of this mechanism S glutathionylation in regulation of protein function has been well documented in a number of research fields Rather paradoxically it has also been highlighted that GSH and notably its catabolites as originated by metabolism by gamma glutamyltransferase can promote oxidative processes by participating in metal ion mediated reactions eventually leading to formation of reactive oxygen species and free radicals Also a fundamental role of GSH has been recognized in the storage and transport of nitric oxide NO in the form of S nitrosoglutathione GSNO The significance of GSH as a major factor in regulation of cell life proliferation and death can be regarded as the integrated result of all these roles as well as of more which are emerging in diverse fields of biology and pathophysiology Against this background modulation of GSH levels and GSH related enzyme activities represents a fertile field for experimental pharmacology in numerous and diverse perspectives of animal plant and microbiologic research This research topic includes 14 articles i e 4 Opinion Articles 6 Reviews and 4 Original Research Articles The contributions by several distinguished research groups each from his own standpoint of competence and expertise provide a comprehensive and updated view over the diverse roles the changing faces of GSH and GSH related enzymes in cell s health disease and death
