Information Systems CoopIS 2023 held in Groningen The Netherlands during October 30 November 3 2023 The 21 regular papers and 10 work in progress papers included in this book were carefully reviewed and selected from 100 submissions They were organized in topical sections as follows Knowledge Engineering Deployment and Migration in CISs Security and Privacy in CISs Process Modeling Process Analytics Human Aspects and Social Interaction in CISs and Work in Progress

The Correspondence of Charles Darwin: Volume 22, 1874 Charles Darwin, 2015-03-05 This volume is part of the definitive edition of letters written by and to Charles Darwin the most celebrated naturalist of the nineteenth century Notes and appendixes put these fascinating and wide ranging letters in context making the letters accessible to both scholars and general readers Darwin depended on correspondence to collect data from all over the world and to discuss his emerging ideas with scientific colleagues many of whom he never met in person The letters are published chronologically volume 22 includes letters from 1874 the year in which Darwin completed his research on insectivorous plants and published second editions of *Descent of Man* and *Coral Reefs* The year also saw an acrimonious dispute between Darwin and St George Jackson Mivart as a result of an anonymous review the latter had written in which he criticised Darwin's son George The Stability of Matter: From Atoms to Stars Elliott H. Lieb, 2013-06-29 The first edition of *The Stability of Matter From Atoms to Stars* was sold out after a time unusually short for a selecta collection and we thought it appropriate not just to make a reprinting but to include eight new contributions They demonstrate that this field is still lively and keeps revealing unexpected features Of course we restricted ourselves to developments in which Elliott Lieb participated and thus the heroic struggle in Thomas Fermi theory where $7/3 \times 5/3$ the accuracy has been pushed from Z^{-1} to Z^{-1} is not included A rich landscape opened up after Jakob Yngvason's observation that atoms in magnetic fields also are described in suitable limits by a Thomas Fermi type theory Together with Elliott Lieb and Jan Philip Solovej it was eventually worked out that one has to distinguish 5 regions If one takes as a dimensionless measure of the magnetic field strength B the ratio Larmor radius Bohr radius one can compare it with N/Z and for each of the domains i $B/N \ll 1$ ii $B/N \ll 1/3$ iii $N \ll 1$ iv $B/N \ll 3$ v B/N a different version of magnetic Thomas Fermi theory becomes exact in the limit $N \rightarrow \infty$ In two dimensions and a confining potential quantum dots the situation is somewhat simpler one has to distinguish only i $B/N \ll 1$ ii B/N
