Luenberger Chapter 3 exercise 7 (p 68) asks for an algebraic proof:

Let A be an $m \times n$ matrix and c be an n-vector. Prove that $Ax \leq 0$ implies $c'x \leq 0$ if and only if $c' = y'A$ for some $y \geq 0$.

Consider this example.

(a) Show that

$$\begin{bmatrix} 1 & 1 & 0 \\ 2 & 0 & -1 \end{bmatrix} x \leq 0 \Rightarrow \begin{bmatrix} 3 & 1 & -1 \end{bmatrix} x \leq 0$$

because $\begin{bmatrix} 3 & 1 & -1 \end{bmatrix} = \begin{bmatrix} 1 & 1 \end{bmatrix} \begin{bmatrix} 1 & 1 & 0 \\ 2 & 0 & -1 \end{bmatrix}$.

(b) On the other hand,

$$\begin{bmatrix} 1 & 1 & 0 \\ 2 & 0 & -1 \end{bmatrix} x \leq 0 \not\Rightarrow \begin{bmatrix} 2 & 1 & -1 \end{bmatrix} x \leq 0$$

because $\begin{bmatrix} 2 & 1 & -1 \end{bmatrix} \neq \begin{bmatrix} y_1 & y_2 \end{bmatrix} \begin{bmatrix} 1 & 1 & 0 \\ 2 & 0 & -1 \end{bmatrix}$.

For example,

$$\begin{bmatrix} 1 & 1 & 0 \\ 2 & 0 & -1 \end{bmatrix} \begin{bmatrix} -1 \\ 1 \\ -2 \end{bmatrix} \leq 0 \text{ but } \begin{bmatrix} 2 & 1 & -1 \end{bmatrix} \begin{bmatrix} -1 \\ 1 \\ -2 \end{bmatrix} = 1.$$

Find another vector $c' \neq y'A$ for any $y \geq 0$ and show a vector x such that $Ax \leq 0$ and $c'x \not\leq 0$.

(c) Now prove the **general** result as requested by Luenberger. You may find linear programming duality useful.

Luenberger Solution Chapter 3:

On-line Estimation and Adaptive Control of Bioreactors G. Bastin,2013-10-22 This book deals with monitoring and control of biotechnological processes Different methods are proposed which are based on the nonlinear structure of the process and do not require any a priori knowledge of the fermentation parameters The theoretical stability and convergence properties of the proposed algorithms are analysed and their performances are illustrated by simulation results and in many instances by real life experiments The concept of software sensors is introduced these are algorithms based on the nonlinear model of the process and designed for on line estimation of the biological variables and or the fermentation parameters In order to deal with process nonstationarities and parameter uncertainties reference is made to adaptive estimation and control techniques The book is the result of an intensive joint research effort by the authors during the last decade It is intended as a graduate level text for students of bioengineering as well as a reference text for scientists and engineers involved in the design and optimization of bioprocesses *H-infinity Control and Estimation of State-multiplicative Linear Systems* Eli Gershon,Uri Shaked,Isaac Yaesh,2005-06-24 Multiplicative noise appears in systems where the process or measurement noise levels depend on the system state vector Such systems are relevant for example in radar measurements where larger ranges involve higher noise level This monograph embodies a comprehensive survey of the relevant literature with basic problems being formulated and solved by applying various techniques including game theory linear matrix inequalities and Lyapunov parameter dependent functions Topics covered include convex H2 and H infinity norms analysis of systems with multiplicative noise state feedback control and state estimation of systems with multiplicative noise dynamic and static output feedback of stochastic bilinear systems tracking controllers for stochastic bilinear systems utilizing preview information Various examples which demonstrate the applicability of the theory to practical control engineering problems are considered two such examples are taken from the aerospace and guidance control areas **The Ocean Circulation Inverse Problem** Carl Wunsch,1996-06-13 This book addresses the problem of inferring the state of the ocean circulation from a mathematical perspective *Formulating Principal-Agent Service Contracts for a Revenue Generating Unit* Shuo Zeng,Moshe Dror,2015-07-02 This book examines contractual options for a performance based contract between an owner of a revenue generating unit and a repair agent for such unit The framework of the analysis is that of economists principal agent problem The contractual options of a principal and an agent are modeled as a Markov process with an undetermined time horizon For a risk neutral principal the authors identify the conditions under which a principal contracts with a risk neutral risk averse or risk seeking agent and derive the principal s optimal offer together with the agent s optimal service capacity response In essence the book provides an extensive formulating analysis of principal agent contracts given any exogenous parameter values Ultimately a small number of formulas cover a large spectrum of principal agent conditions *Projection Methods in Constrained Optimisation and Applications to Optimal Policy Decisions* Berc Rustem,1981

Flexible Robot Dynamics and Controls Rush D. Robinett III,John Feddema,G. Richard Eisler,Clark Dohrmann,Gordon G. Parker,David G. Wilson,Dennis Stokes,2012-12-06 This book is the result of over ten 10 years of research and development in flexible robots and structures at Sandia National Laboratories The authors de cided to collect this wealth of knowledge into a set of viewgraphs in order to teach a graduate class in Flexible Robot Dynamics and Controls within the Mechanical En gineering Department at the University of New Mexico UNM These viewgraphs encouragement from several students and many late nights have produced a book that should provide an upper level undergraduate and graduate textbook and a reference for experienced professionals The content of this book spans several disciplines including structural dynam ics system identification optimization and linear digital and nonlinear control theory which are developed from several points of view including electrical me chanical and aerospace engineering as well as engineering mechanics As a result the authors believe that this book demonstrates the value of solid applied theory when developing hardware solutions to real world problems The reader will find many real world applications in this book and will be shown the applicability of these techniques beyond flexible structures which in turn shows the value of mul tidisciplinary education and teaming   *An Invitation to Statistics in Wasserstein Space* Victor M. Panaretos,Yoav Zemel,2020-03-10 This open access book presents the key aspects of statistics in Wasserstein spaces i e statistics in the space of probability measures when endowed with the geometry of optimal transportation Further to reviewing state of the art aspects it also provides an accessible introduction to the fundamentals of this current topic as well as an overview that will serve as an invitation and catalyst for further research Statistics in Wasserstein spaces represents an emerging topic in mathematical statistics situated at the interface between functional data analysis where the data are functions thus lying in infinite dimensional Hilbert space and non Euclidean statistics where the data satisfy nonlinear constraints thus lying on non Euclidean manifolds The Wasserstein space provides the natural mathematical formalism to describe data collections that are best modeled as random measures on Euclidean space e g images and point processes Such random measures carry the infinite dimensional traits of functional data but are intrinsically nonlinear due to positivity and integrability restrictions Indeed their dominating statistical variation arises through random deformations of an underlying template a theme that is pursued in depth in this monograph   *Numerical Solution of Systems of Simultaneous Polynomial Equations* Stanford University.
