Airline Industry JayEtta Z. Hecker,United States. Government Accountability Office,2008 The airline industry generates operating revenues of 172 billion in 2007 amounting to over 1% of the U S gross domestic product It carried more than 700 million passengers in 2007 Airline deregulation in 1978 led at least in part to increasingly volatile airline profitability resulting in periods of significant losses and bankruptcies In response some airlines have proposed or are considering merging with or acquiring another airline This report describes 1 the financial condition of the U S passenger airline industry 2 whether the industry is becoming more or less competitive 3 why airlines seek to merge with or acquire other airlines and 4 the role of fed authorities in reviewing proposed airline mergers and acquisitions Charts and tables **Low-Cost Carriers in Emerging Countries** John Bowen,2019-02-14 Low Cost Airline Carriers in Emerging Countries traces the development of low cost carriers LCCs in Asia Latin America the Middle East and Africa examining airlines that have become significant players in their home markets but little known at a global scale The book maps the geography of the LCC phenomenon explaining the starkly varying success of budget airlines and assessing their current social economic and environmental impacts The book concludes with insights into the future potential of the LCC phenomenon along with its global ramifications Beginning with Southwest Airlines in the 1970s low cost carriers LCCs have democratized air travel around the world fostering huge increases in airline traffic and transforming the airline industry At the same time however the ascent of these budget airlines has exacerbated aviation related problems such as aircraft noise airport congestion greenhouse gas emissions and more LCCs have been extensively studied in the US and Europe but not in emerging regions of the globe Yet the impact of such airlines is greatest in low and middle income economies where only a small fraction of the population has ever flown and where competition from alternative modes road rail is weak *Low Cost Carriers* Lucy Budd,Stephen Ison,2017-07-05 Low cost carriers LCCs represent one of the most exciting and dynamic yet often contentious developments in recent commercial aviation history Formed as a direct result of policies of airline deregulation and liberalisation that were initiated in the United States in the late 1970s before being implemented in certain European Australasian Latin American and other world markets from the mid 1990s onwards to encourage competition LCCs have been responsible for progressively reconfiguring the spatial patterns operational practices and passenger experiences of flight In the process they have enabled

growing numbers of people to fly to more places more frequently and at lower cost than had been previously possible. In so doing however they have generated a number of socio economic and environmental challenges. The 23 essays included in this volume provide a detailed insight into the emergence expansion and evolution of the low cost carrier sector worldwide. The volume covers deregulation and liberalisation of the global airline sector the business models and operating characteristics of low cost carriers the changing nature of the airline airport relationship LCC network characteristics issues of pricing and competition and the current impacts and likely future trajectories.

Flying Off Course IV, *The Airline Industry* Alessandro Cento, 2008-10-15. The debate on the future of the aviation sector and the viability of its traditional business practices is the core of this book. The liberalization of the EU market in the 1990s has radically modified the competitive environment and the nature of airline competition. Furthermore the new millennium began with terrorist attacks epidemics trade globalization and the rise of oil prices all of which combined to push the industry into a perfect storm. Airline industry profitability has been an elusive goal for several decades and the recent events have only accentuated existing weaknesses. The main concern of industry observers is whether the airline business model successful during the 1980s and 1990s is now sustainable in a market crowded by low cost carriers. The airlines that will respond rapidly and determinedly to increase pressure to restructure consolidate and segment the industry will achieve competitive advantages. In this context the present study aims to model the new conduct of the legacy carriers in a new liberalized European market in terms of network and pricing competition with low cost carriers and competitive reaction to the global economic crises.

Flying Off Course Rigas Doganis, 2009-12-18. The airline industry presents an enigma. High growth rates in recent decades have produced only marginal profitability. This book sets out to explain in clear and simple terms why this should be so. It provides a unique insight into the economics and marketing of international airlines. *Flying Off Course* has established itself over the years as the indispensable guide to the inner workings of this exciting industry. This enlarged fourth edition largely rewritten and completely updated takes into account the sweeping changes which have affected airlines in recent years. It includes much new material on many key topics such as airline costs open skies air cargo economics charters and new trends in airline pricing. It also contains two exciting new chapters on the economics of the low cost no frills carriers and on the future prospects of the industry. The book provides a practical insight into key aspects of airline operations planning and marketing within the conceptual framework of economics. It is given added force by the author's hands on former experiences as a Chairman and CEO of Olympic Airways and as a non executive Director of South African Airways while he is currently a non executive Director of easyJet.
