Social Im/mobilities in Africa Joël Noret, 2019-11-08 Grounded in both theory and ethnography this volume insists on taking social positionality seriously when accounting for Africa's current age of polarizing wealth To this end the book advocates a multidimensional view of African societies in which social positions consist of a variety of intersecting social powers or capitals including wealth education social relationships religion ethnicity and others Accordingly the notion of social im/mobilities emphasizes the complexities of current changes taking us beyond the prism of a one dimensional social ladder for social moves cannot always be apprehended through the binaries of gains and losses

The Global Testing Culture William C. Smith,2016-01-04 The past thirty years have seen a rapid expansion of testing exposing students worldwide to tests that are now more than ever standardized and linked to high stakes outcomes The use of testing as a policy tool has been legitimized within international educational development to measure education quality in the vast majority of countries worldwide The embedded nature and normative power of high stakes standardized testing across national contexts can be understood as a global testing culture The global testing culture permeates all aspects of education from financing to parental involvement to teacher and student beliefs and practices The

reinforcing nature of the global testing culture leads to an environment where testing becomes synonymous with accountability which becomes synonymous with education quality. Underlying the global testing culture is a set of values identified from the increasing literature on world culture. These include education as a human right, academic intelligence, faith in science, decentralization, and neoliberalism. Each of these values highlights different aspects of the dialogue in support of high stakes standardized testing. The wide approval of these values and their ability to legitimate various aspects of high stakes testing reinforces the taken-for-granted notion that such tests are effective and appropriate education practices. However, a large body of literature emphasizes the negative unintended consequences: teaching to the test, reshaping the testing pool, the inequitable distribution of school resources, and teachers' attention and reconstructing the role of the student, teacher, and parent, commonly found when standardized census-based tests are combined with high stakes outcomes for educators or students. This book problematizes this culture by providing critical perspectives that challenge the assumptions of the culture and describe how the culture manifests in national contexts. The volume makes it clear that testing per se is not the problem. Instead, it is how tests are administered, used, or misused and linked to accountability that provide the global testing culture with its powerful ability to shape schools and society and lead to its unintended, undesirable consequences.

Towards a holistic approach to support learners at risk of interrupted development Macalane J. Malindi, Johnnie Hay, Thabo Makhalemele, 2024-02-23. The COVID-19 pandemic and the restrictions that came with it led to unprecedented disruptions in learner development and put them at risk of poor developmental outcomes. It is thus important that the extent of the disruption on their development and the support needs of learners be investigated. Researching the impact of the disruption should focus on holistic development. In this book, the authors use multiple research approaches and methods of gathering data in their respective fields to examine the impact of the disruption and determine the support needs of learners. Data gathered through the different methods are processed and findings are presented. The findings have implications for both practice and future research in the fields of inclusive education, learner support, educational psychology, movement education, Life Orientation, and curriculum development.
