Cost Analysis of Electronic Systems Peter Sandborn, 2013 Understanding the cost ramifications of design manufacturing and life cycle management decisions is of central importance to businesses associated with all types of electronic systems. *Cost Analysis of Electronic Systems* contains carefully developed models and theory that practicing engineers can directly apply to the modeling of costs for real products and systems. In addition, this book brings to light and models many contributions to life cycle costs that practitioners are aware of but never had the tools or techniques to address quantitatively in the past. *Cost Analysis of Electronic Systems* melds elements of traditional engineering economics with manufacturing process and life cycle cost management concepts to form a practical foundation for predicting the cost of electronic products and systems. Various manufacturing cost analysis methods are addressed including process flow, parametric cost of ownership, and activity based costing. The effects of learning curves, data uncertainty, test and rework processes, and defects are considered. Aspects of system sustainment and life cycle cost modeling including reliability, warranty, burn in, maintenance, sparing, and availability, and obsolescence are treated. Finally, total cost of ownership of systems and return on investment are addressed. Real life design scenarios from integrated circuit fabrication, electronic systems assembly, substrate fabrication, and electronic systems management are used as examples of the application of the cost estimation methods developed within the book.

Cost Analysis Of Electronic Systems (Second Edition) Peter Sandborn, 2016-12-15 This book provides an introduction to the cost modeling for electronic systems that is suitable for advanced undergraduate and graduate students in electrical, mechanical, and industrial engineering and professionals involved with electronics technology development and management. This book melds elements of traditional engineering economics with manufacturing process and life cycle cost management concepts to form a practical foundation for predicting the cost of electronic products and systems. Various manufacturing cost analysis methods are addressed including process flow, parametric cost of ownership, and activity based costing. The effects of learning curves, data uncertainty, test and rework processes, and defects are considered. Aspects of system sustainment and life cycle cost modeling including reliability, warranty, burn in, maintenance, sparing, and availability, and obsolescence are treated. Finally, total cost of ownership of systems, return on investment, cost benefit analysis, and real options analysis are addressed.
