Electromagnetic Metamaterials Christophe Caloz, Tatsuo Itoh, 2006. Electromagnetic metamaterials from fundamental physics to advanced engineering applications. This book presents an original generalized transmission line approach associated with non resonant structures that exhibit larger bandwidths lower loss and higher design flexibility. It is based on the novel concept of composite right left handed CRLH transmission line metamaterials MMs which has led to the development of novel guided wave radiated wave and refracted wave devices and structures. The authors introduced this powerful new concept and are therefore able to offer readers deep insight into the fundamental physics needed to fully grasp the technology. Moreover they provide a host of practical engineering applications. The book begins with an introductory chapter that places resonant type and transmission line metamaterials in historical perspective. The next six chapters give readers a solid foundation in the fundamentals and practical applications. Fundamentals of LH MMs describes the

fundamental physics and exotic properties of left handed metamaterials TL Theory of MMs establishes the foundations of CRLH structures in three progressive steps ideal transmission line LC network and real distributed structure Two Dimensional MMs develops both a transmission matrix method and a transmission line method to address the problem of finite size 2D metamaterials excited by arbitrary sources Guided Wave Applications and Radiated Wave Applications present a number of groundbreaking applications developed by the authors The Future of MMs sets forth an expert view on future challenges and prospects This engineering approach to metamaterials paves the way for a new generation of microwave and photonic devices and structures It is recommended for electrical engineers as well as physicists and optical engineers with an interest in practical negative refractive index structures and materials The Rapid Design of RF Amplifiers Alexander N. Stewart,2004 *Multiresolution Time Domain Scheme for Electromagnetic Engineering* Yinchao Chen,Qunsheng Cao,Raj Mittra,2005-01-28 The rapid development of computer techniques and information technologies in recent decades has fueled the need for efficient tools for electromagnetic modeling of millimeter wave integrated circuits high speed and high density VLSI circuits including computer chips and wireless computer applications The Publishers' Trade List Annual ,1983 Microwave Engineering, Fourth Edition Wiley E-Text Reg Card Pozar,2013-02-11 **Microcomputers and Their Interfacing** R.
