Mount Kenya University 2015 Prospectus:

SELECTION OF ARTICLES ON FOOD LAW AND POLICY Innayaton Soeparna, dkk.,2025-10-08 This book encapsulates the essence of those crucial discussions providing not only an overview of the current state of the field but also a strategic framework for future action The included fifteen papers offer cutting edge research on a diverse range of topics extending beyond food and agricultural policy to encompass the intersection of law and sustainable development Consequently the book is structured into two chapters Chapter One presents selected papers on Food and Agricultural Law and Policy while Chapter Two features selected papers on Law and Sustainable Development *Environmental Energy Sustainability at Universities* Alberto Jesús Perea Moreno,Francisco G. Montoya,2021-01-06 The use of renewable energies and energy saving and efficiency are needs of global society and universities Universities have a large responsibility and social impact as they are an example and engine of social change Universities in the European context must be at the forefront of ESA processes seeking to be at the same level as and preferably higher than the rest of society seeking a goal of 20% renewable energy for 2020 and in the longer term greater energy efficiency based on a diverse use of renewable energy and studying the feasibility of other energy processes cogeneration trigeneration etc The application of renewable energies and energy efficiency allow universities to make significant savings in their costs and contribute to sustainable development and the fight against climate change Actions in pursuit of these goals in addition to the objective of energy saving should promote research and form an example for the university community This book aims to advance the contribution of energy saving and the use of renewable energies in order to achieve more sustainable universities Cross-cutting issues in the water, land, energy and food security nexus: Perspectives from sub-saharan africa Felix Kwabena Donkor,Mulala Danny Simatele,Henry Bikwibili Tantoh,2023-06-27 *Unlocking the Lower Skies* Aiga Stokenberga,Maria Catalina Ochoa,2021-06-08 This book explores the economic and broader societal rationale for using unmanned aerial vehicle UAV or drone technologies as a complement to the current transport and logistics systems in several use cases in East Africa The specific use cases examined include medical goods deliveries food aid delivery land mapping and risk assessment agriculture and transport and energy infrastructure inspection Across these applications the case for using UAVs is examined within the context of logistics objectives total operating costs speed availability and flexibility as well as human or societal objectives In the public health use case as more low and middle income countries explore opportunities to improve efficiency and performance in their health supply chains and diagnostics networks they face myriad choices about how best to use UAVs to improve product availability and public health outcomes and to reach the last mile The high level findings from this analysis are that if examining commodity categories individually and looking exclusively at costs delivery with UAVs in general is still more expensive for most categories Although the cost is still higher the most cost effective use case examples include the transport of laboratory samples to selected destinations and delivery of life saving items and blood However layering several use cases

can provide efficiencies and cost savings by allocating fixed costs across a greater number of flights and maximizing capacity and time utilization From the perspective of public decision makers the cost effectiveness of UAVs cannot be analyzed without looking at the public health benefits which may be substantial Drone application in the other use cases examined in this book such as mapping risk assessment and agriculture is relatively more common than cargo drone operations and the existing pilot initiatives in East Africa have delivered impressive results for speed and quality precision Food aid delivery by drones is still mostly at a planning rather than implementation stage Drone applications are rapidly evolving and several use cases could gain impact and scale over the coming years
