advances in the use of pattern recognition techniques for computer and robot vision The sciences of pattern recognition and
computational vision have been inextricably intertwined since their early days some four decades ago with the emergence of
fast digital computing All computer vision techniques could be regarded as a form of pattern recognition in the broadest
sense of the term Conversely if one looks through the contents of a typical international pattern recognition conference
proceedings it appears that the large majority perhaps 70 80% of all pattern recognition papers are concerned with the
analysis of images In particular these sciences overlap in areas of low level vision such as segmentation edge detection and
other kinds of feature extraction and region identification which are the focus of this book **Popular Photography**
