Volume I: Study Results Joseph S. Koziol,1999 **The Adaptive Cruise Control Handbook - Everything You Need to Know about Adaptive Cruise Control** Rita Barber,2016-11-14 There are laws of nature so why shouldn t there be laws of Adaptive Cruise Control success As Rita Barber notes you can build an impressive airplane but it will never leave the ground if you ignore the laws of physics especially gravity Why then shouldn t there also be laws of Adaptive Cruise Control that must be followed to launch and maintain Adaptive Cruise Control projects In The Adaptive Cruise Control Handbook Rita Barber offers a compendium of innovative rules for understanding and succeeding in the Adaptive Cruise Control marketplace These valuable insights stand the test of time and present a clear path to successful Adaptive Cruise Control results Violate them at your own risk PLUS INCLUDED with your purchase are real life document resources this kit is available for instant download giving you the tools to navigate and deliver on any Adaptive Cruise Control goal **Cooperative Adaptive Cruise Control Human Factors Study** Vaughan W. Inman,Steven Jackson,Brian H. Philips,2016 This study set out to examine the following diverse questions regarding cooperative adaptive cruise control CACC use Does CACC reduce driver workload relative to manual gap control Does CACC increase the probability of driver distraction relative to manual gap control Does CACC result in reduced driver arousal relative to manual gap control Does CACC result increase the ability to avoid a crash when exposed to an extreme breaking event Will drivers trust the CACC system These questions were addressed in an experiment conducted in the Federal Highway Administration Highway Driving Simulator A total of 49 licensed drivers were tested with 12 or 13 participants in each of 4 groups All of the groups drove in the third position in a five vehicle platoon in which all of the other vehicles were equipped with simulated CACC The groups differed as to whether the participant vehicle was equipped with

CACC and the type of event at the end of the drive that disturbed the longitudinal spacing of the platoon As assessed by the National Aeronautics and Space Administration Task Load Index the CACC system did reduce perceived driver workload relative to driving without cruise control CACC users appeared slightly more likely to engage in diversionary activities e.g listening to the car radio than control group drivers CACC yielded a substantial and statistically reliable reduction in the probability of a crash No evidence was obtained to suggest that use of CACC leads to lower levels of driver arousal than manual gap control Participants showed a great deal of trust in the CACC system In a situation where all of the control participants used the brake to maintain a comfortable gap only 2 of 36 CACC users overrode the system with the brake or accelerator

Summary Report Vaughan W. Inman, Stacy A. Balk, Steven Jackson, Brian H. Philips, 2017 This summary report provides a high level overview of four experiments that investigated human factors issues surrounding cooperative adaptive cruise control CACC CACC combines three driver assist systems 1 conventional cruise control which automatically maintains the speed a driver has set 2 adaptive cruise control which uses radar or light detection and ranging sensors to automatically maintain a gap the driver has selected between the driver's vehicle and a slower moving vehicle ahead and 3 dedicated short range communications to transmit and receive data with surrounding vehicles so that the cruise control system can more quickly respond to changes in speed and location of other CACC vehicles even vehicles that the driver cannot see This report describes a series of experiments that examined how use of a CACC affected drivers workload propensity to distraction level of physiological arousal ability to avoid a crash merging abilities and trust in the system The first experiment compared driving with CACC in a string of four or five vehicles with manual control of the following distance in the same strings The second experiment explored driver performance when merging into a string of CACC vehicles The third experiment took a closer look at the source of a substantial crash reduction benefit obtained with CACC in the first experiment The fourth experiment examined the effect of a driver's preferred following distance on performance and workload when using short and long CACC gap settings

Manual Ap60 Crusie Control Book Review: Unveiling the Magic of Language

In a digital era where connections and knowledge reign supreme, the enchanting power of language has become more apparent than ever. Its ability to stir emotions, provoke thought, and instigate transformation is really remarkable.
